ORCID: <http://orcid.org/0000-0001-5283-5139>

EDUCATION

Ph.D. in Mechanical Engineering *summa cum laude* 06/2012–12/2015
Karlsruhe Institute of Technology, Karlsruhe, Germany. *(with highest honor)*

Dissertation title: Phase-field modeling of microstructural pattern formation in alloys and geological veins.

Integrated Dual Degree (Bachelor+Master) in *First Class* 08/2005–05/2010
Metallurgical Engineering
Indian Institute of Technology, Banaras Hindu University
(IIT, BHU), Varanasi, India.

PROFESSIONAL EXPERIENCE

Assistant Professor (Tenure-track) 08/2017–present
Materials Science & Engineering, School for Engineering of Matter, Transport & Energy, Arizona State University, Tempe, United States.

PROFESSIONAL PREPARATION

Postdoctoral Research Associate 08/2016–07/2017
Materials Science and Engineering, Texas A&M University, College Station, United States.

Group Leader 12/2015–07/2016
Institute of Applied Materials (Computational Materials Science), Karlsruhe Institute of Technology, Karlsruhe, Germany.
Group: Quantitative modeling of phase transformations.

Research Assistant 06/2012–12/2015
Institute of Materials and Processes, Karlsruhe University of Applied Sciences, Karlsruhe, Germany.

Research Assistant 06/2010–05/2012
Chair of Materials and Process Simulations, University of Bayreuth, Bayreuth, Germany.

RESEARCH INTERESTS

My research group specializes in the development and application of mesoscopic modeling techniques and their integration with continuum approaches for both fundamental and applied research in microstructure science and engineering. I am currently interested in deciphering computational pathways to optimally design microstructure processing routes. Target areas include solidification, solid-state transformations and grain coarsening in multicomponent alloys and geomaterials, electromigration-induced damage, and self-organization in polymers and vapor-deposited films.

RESEARCH GRANTS

Principal investigator Co-PI: Nikhilesh Chawla, Arizona State University National Science Foundation (NSF) Project title: 4D Characterization of Damage in Interconnects: Experiment and Simulation.	\$457,194	since 08/2018
Principal investigator Co-I: Martin Glicksman, Florida Institute of Technology National Aeronautics and Space Administration (NASA) Project title: Advanced Modeling and Simulation of Crystal Growth Dynamics.	\$200,000	since 08/2018
Principal investigator German Research Foundation's Young Investigator's Grant (DFG Nachwuchsakademie) Project title: Microstructural pattern formation during eutectoid transformation in multicomponent steels.	278,000 €	03/2016 - 03/2019
Principal investigator Fulton Undergraduate Research Initiative (FURI) Arizona State University	\$2,500	02/2018 - 06/2018

AWARDS & FELLOWSHIPS

08/2014:	<i>Poster award</i> at the Third International Symposium on Phase-field Methods, Pennsylvania State University, State College, United States.
06/2012 - 05/2015:	'Graduate School 1483' fellowship of the German Research Foundation (DFG Graduiertenkolleg 1483).
06/2010 - 05/2012:	Research fellowship 718 'FRACS' of the German Society for Petroleum and Coal Science and Technology (DGMK).

EXTERNAL SERVICE**Referee**

Federal-agencies:	ACS Petroleum Research Fund NASA Space Technology Research Fellowship (NSTRF)
Scientific Journals:	Journal of Crystal Growth (Elsevier), Scientific Reports (Nature Publishing Group), Physica D : Nonlinear Phenomena (Elsevier), Journal of Materials Science (Springer), Materials Research Letters (Taylor & Francis), Science and Technology of Welding and Joining (Taylor & Francis), Materials Science and Engineering A (Elsevier), IEEE Transactions on Knowledge and Data Engineering (IEEE), Journal of Phase Equilibria and Diffusion (Springer), Materials Theory (Springer).

Organizing Activities

Lead-organizer of the minisymposium titled *Recent advances in phase-field modeling and analysis of microstructural evolution* at the upcoming **SIAM Conference on Mathematical Aspects of Materials Science 2018 (MS 18)** in Portland, OR. This mini-symposium which features 20 invited lectures de-

livered by experts from all across the globe and a poster session for students focused on the recent developments and applications of the phase-field method and numerical post-processing techniques for microstructural quantification.

TEACHING

Course	Title	Semester	Level
MSE 494/598	Microstructure Modeling & Simulations	Fall 2017	Graduate/Undergraduate
MSE 355	Structure and Defects	Fall 2018	Undergraduate
MSE 335	Materials Kinetics	Spring 2019	Undergraduate

MENTORING

Arizona State University:

Graduate students

08/2017 -present:	Phase-field modeling of nanostructural self-assembly in vapor-deposited films	Rahul Raghavan
08/2018 -present:	Advanced Modeling and Simulation of Crystal Growth Dynamics	Luke Baker
08/2018 -present:	Phase-field modeling of electromigration-induced defects in polycrystalline interconnects	William Farmer

Undergraduate students

02/2018 -present:	Computational pathways to the optimal design of polymer processing routes	Timoteo Diaz
-------------------	---	--------------

Karlsruhe Institute of Technology, Germany: As Leader of the group - *Quantitative Modeling of Phase Transformations*, co-supervision of:

Graduate students

12/2013 - 08/2015:	Phase-field modeling of diffusive and displacive transformation in binary steel	Tobias Mittnacht (Master's thesis)
08/2014 - present:	Phase-field modeling of electromigration-induced grain-boundary grooving and hillock formation in interconnects, Electric-field induced pattern formation in diblock copolymers	Arnab Mukherjee
08/2014 - present:	Rapid Solidification in Ni-Zr glass-forming alloys	Sumanth Enugala
07/2015 - present:	Rayleigh instabilities of pearlitic lamellae during sub-critical annealing of steel	Prince Gideon Kubendran Amos
04/2016 - present:	Phase-field modeling of polycrystalline evolution in geological veins	Nishant Prajapati
04/2016 - present:	Influence of convection on directionally solidified pattern evolution	Pavan Laxmipathy Veluvali

Undergraduate students

06/2013 - 10/2013:	Phase-field study of polycrystalline calcite evolution in geological veins	Sebastian Farag
11/2012 - 10/2013:	Phase-field study of pearlitic growth in mixed diffusion-controlled regime.	Tobias Mittnacht

Postdoctoral researchers

08/2014 - 03/2016:	Phase-field simulations of curvature-induced cascading of Widmanstätten-ferrite plates	Dr. Avisor Bhattacharya
05/2016 - present:	Microstructural pattern formation during eutectoid transformation in multicomponent steels	Dr. Leslie Mushongera

CONFERENCE PRESENTATIONS

Invited talks

1. Controlling nanostructured morphologies in vapor-deposited thin films: Towards guided vapor deposition (2018). In: *International Conference on Plasticity, Damage, and Fracture*. San Juan, PR, United States.
2. Controlling the morphological self-assembly in phase-separating materials (2018). In: *Nanoscience Seminar, Department of Physics, Arizona State University*. United States.
3. Morphological self-assembly in vapor-deposited binary films (2018). In: *SIAM Conference on Mathematical Aspects of Materials Science*. Portland, OR, United States.
4. Phase-field modeling of microstructural pattern formation in eutectoid steels (2018). In: *Department of Materials Science & Engineering, Indian Institute of Technology-Kanpur*. India.
5. Phase-field modeling of microstructural pattern formation in eutectoid steels (2018). In: *Department of Metallurgical Engineering, Indian Institute of Technology (BHU)- Varanasi*. India.
6. Self-organization of Nanostructured Morphologies in Physical Vapor Deposited Phase-separating Multicomponent Alloys (2018). In: *13th World Congress in Computational Mechanics*. New York, United States.
7. Controlling the assembly of sputtered, multiphase-metallic thin films (2017). In: *Engineering Mechanics Institute Conference (EMI 2017)*. San Diego, United States (upcoming).
8. Microstructural pattern formation during eutectoid transformation in multicomponent steels (2015). In: *German Research Foundation's Early Career Investigators Workshop (DFG Nachwuchssakademie)*. Schlitz, Germany.
9. Phase-field modeling of crystal growth in geological veins - A first look (2014). In: *3rd International Symposium on Phase-field Method (PFM) 2014*. State College, United States.
10. Mathematical modeling of microstructural evolution in geological vein networks and solid-state phase transformations (2013). In: *Workshop on polycrystalline growth - New insights from experiments and modeling*. Karlsruhe, Germany.
11. Numerical methods to study phase transformation and transport mechanisms in veins (2013). In: *Petrotherm Seminar of the division of Geothermal Energy (AGW, KIT)*. Karlsruhe, Germany.
12. Phase-field modeling of microstructural pattern formation in eutectoid steels (February 2017). In: *Department of Mechanical Engineering, San Diego State University*. San Diego, United States.
13. Phase-field modeling of microstructural pattern formation in eutectoid steels (February 2017). In: *School for Engineering of Matter, Transport & Energy, Arizona State University*. Tempe, United States.
14. Phase-field modeling of microstructural pattern formation in eutectoid steels (February 2017). In: *Department of Mechanical Engineering, University of Louisville*. Louisville, United States.
15. Phase-field modeling of microstructural pattern formation in eutectoid steels (March 2017). In: *Department of Mechanical and Aerospace Engineering, University of Alabama in Huntsville*. Huntsville, United States.
16. Phase-field modeling of microstructural pattern formation in eutectoid steels (March 2017). In: *Department of Materials Science & Engineering, Texas A&M University*. College Station, United States.

Contributed talks

1. Predicting Self-organization of Nanostructured Morphologies in Physical Vapor Deposited Phase-separating Alloys (2018). In: *TMS Annual Meeting*. Phoenix, United States.
2. Tailoring of epitaxially deposited nanostructured thin films: Insights from a phase-field approach. (2016). In: *Texas A&M University Postdoctoral Research Symposium*. College Station, United States.
3. Amending the theory of non-cooperative eutectoid transformation: insights from phase-field simulations (2015). In: *TMS Annual Meeting*. Orlando, United States.
4. Phase-field investigation of capillary-mediated interface perturbations (2015). In: *European Conference on Crystal growth*. Bologna, Italy.
5. A three-dimensional phase-field study of grain boundary tracking behavior in crack-seal microstructures. (2013). In: *European Geosciences Union - General Assembly*. Vienna, Austria.
6. Computational study of pearlite growth in mixed diffusion-controlled regime (2013). In: *2nd World Congress on Integrated Computational Materials Engineering*. Salt Lake City, United States.
7. Theoretical and numerical study of eutectoid transformation in diffusion-controlled regime (2013). In: *Workshop on Composite Research in Mechanics and Forum for Metal Plasticity and Functionally Graded Structures*. Paderborn, Germany.
8. Modeling mineral vein dynamics: A phase-field approach. (2011). In: *European Geosciences Union - General Assembly*. Vienna, Austria.
